PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8809\*

SESSION NUMBER: 01

DATE OF SESSION: 1 Mar 88

DATE OF REPORT: 1 Mar 88

START: 0955

END: 1120

METHODOLOGY: CRV/GT

VIEWER IDENTIFIER: 018

SG1A

2. (S/NF/SK) VIEWER TASKING: Viewer was tasked only with the unencrypted coordinates.

3. (S/NF/SK) COMMENTS: Unencrypted coordinates prompted some analytic tendencies from the viewer about mid-session, generating mild ADL. Recommend return to encryption. Some slight possibility that viewer produced more direct signal line information because of open coordinates. Monitor more familiar with 018's usual performance should review session to determine this. Additionally, monitor noted that viewer was rewriting S-4 matrix line after every ADL Bk or other interruption in session proceedings. Monitor recommended cessation of this practice; viewer agreed.

## memorandum

DATE: 1 March, 1988

REPLY TO  
ATTN OF: DT-S

SUBJECT: SESSION SUMMARY (C/SS)

SG1J ☐ TO: DT-S (ATTN: [REDACTED])

1. (S-SS) Statistics:	Viewer:	018
	Session date:	1 MAR 88
SG1A <input type="checkbox"/>	Mode of operation:	CRV

2. [REDACTED]

3. (S-SS) Results:

a. The site is near a body of water. The water appeared black (AOL: like ink), more viscous than normal, and to have a very rough surface (AOL: like very choppy waves).

b. The site gave the impression of one very tall structure surrounded by many smaller structures. The tall structure seem to have something atop it (see drawing, page 11). The smaller structures are not arranged symmetrically, as in a city, but seem to be placed in random directions to the tall structure (see drawing, page 13).

c. The area immediately around the site has semi-circular "streets" which come up to the tall structure, then circle part-way around it (see drawings, pages 12 and 13A).

d. The area directly at the site seems to be made of large, long, metallic "beams" (see sketch, page 20 and tracker of cross-section, page 20A). These "beams" are lying around (AOL: like at a construction site) inside a fenced area. There was a strong and recurring impression that these "beams" were painted green, rather than the red or orange we use in the U.S.

e. From early on in the session, there were recurring impressions that I was at a "space-port" or "rocket-launching site" (AOL: like Cape Kennedy, Tyuratam, etc.).
